

ISO 15765

The ISO 15765 protocol stack was designed to meet the demanding needs of the high speed Controller Area Network (CAN). The ISO 15765 source code uses a high performance modular design and has a simple API. It is written entirely in the C programming language and can be used on any platform with a 8/16/32 bit microcontroller, either with or without an operating system. Benchmarks have shown the stack to be 800% more efficient than other commercially available solutions.

Features

- *Multi-channel support*
- *ISO 15765-2 and ISO 15765-4 support*
- *EOBD, OBD-II, UDS, KWP2000 support*
- *Fifty 8/16/32-bit CPUs and DSPs support*
- *Small ROM/RAM requirements*
- *Runs with or without an RTOS*
- *Sending and receiving of messages*
- *PDU Message filtering*
- *Request message processing*

Deliverables

Deliverables include the ISO 15765 protocol stack, well documented source code, a complete user's manual, and examples showing how to send and receive ISO 15765 messages.
