Renesas RX631 CAN Software Driver

Press release date: September 2, 2019

September 2, 2019, Terre Haute, IN – Simma Software, Inc. announced today the release of a high-performance CAN device driver for the Renesas RX631 microcontroller. The release of this CAN driver adds to the growing list of supported microcontrollers that are used in conjunction with the major CAN protocols including J1939, ISO 15765, [UDS](#), CANopen, XCP, and NMEA 2000.

The RX family of 32-bit microcontrollers is equipped with the Renesas exclusive RXv1/RXv2 CPU core. These Renesas microcontrollers are highlighted by excellent operational performance combined with superior power efficiency. The RX600 series boasts an extensive product lineup and is the mainstream series in the RX family.

The [CAN software](#) for the RX631 marks the first production software module Simma Software has released into the market that supports a Renesas microcontroller. According to Patrick Browne, the firm's Director of Business Development, "This is an important addition to our ever-growing list of supported MCUs. Renesas is a major player in the global semiconductor market, so adding them to the list of companies we support opens up many additional opportunities for us to engage new customers."

About Simma Software, Inc.

Simma Software, Inc. specializes in real-time embedded software and hardware for the automotive, military, and industrial automation industry. Products and services include protocol stacks, bootloaders, device drivers, training, and consultation on the following technologies: J1939, CAN, J1587, J1708, J2497, J1922, J1979, ISO 15765, OBD-II, CANopen, UDS, XCP, and NMEA2000. The firm also has a full suite of vehicle network adapters supporting RS232, USB, and Bluetooth interfaces.
