XCP Protocol

Press release date: January 5, 2015

January 5, 2015, Terre Haute, IN – Simma Software, Inc. announced today new offerings to their growing list of software solutions for OEM's, fleets, and service providers in the heavy duty and commercial vehicle market. A software protocol stack for **XCP**, or Universal Measurement and Calibration Protocol, is now available.

“XCP is the successor to CCP, or CAN calibration protocol”, according to JR Simma, Founder and Director of Engineering. “Expanding our software library to include the XCP protocol was a natural addition as many of our automotive customers are using networks other than CAN for their transport layer.”

With an ongoing focus on quality and performance, Simma Software continues to expand by meeting the hardware and software needs of its customer base.

About Simma Software, Inc.

Simma Software, Inc. specializes in real-time embedded software and hardware for the automotive, military, and industrial automation industry. Products and services include protocol stacks, bootloaders, device drivers, training, and consultation on the following technologies: J1939, CAN, J1587, J1708, J2497, J1922, J1850, J1979, ISO 15765, OBD-II, CANopen, UDS, KWP2000, and NMEA2000.
